

## PRESS INFORMATION

## No fireplace – but still a fire!

---

**A fireplace connection is not possible? But you don't have to do without a fire - an electric fire is a real alternative.**

At any time and in any room - just press a button and you can enjoy an authentic fire experience. attika is expanding its existing range of fireplaces, stoves and gas fireplaces with the two electric fires eSENSE Single and eSENSE Living.

eSENSE works with water vapor and dynamically dimmed LED light. The high-quality imitation ceramic wood, ceramic chips and glass splinters are assembled by hand by employees of a charitable institution in Zug (GGZ), making each eSENSE unique. In addition to the cozy fire effect, eSENSE also humidifies the room air and thus improves the indoor climate. The electric fire does not generate any heat and therefore poses no danger at any time. There are no odors or emissions. eSENSE is therefore not only a special eye-catcher in any room, but also a good solution for the environment.

eSENSE Living is a finished piece of furniture made of steel in black or nickel with an integrated tank and pump. With its oak finish and glass surround, the furniture offers a freestanding and elegant solution. eSENSE Single, on the other hand, can be installed individually. The electric fire is also available with an integrated tank, but also offers the option of an external tank solution or a direct water connection.

An electric fire is not simply a compromise that you make when there is no fireplace connection. The electric fire is particularly suitable for high-density construction, for apartments in cities, hotels, restaurants or bars. eSENSE adds atmosphere and cosiness to the room. It fits in perfectly with an architecturally individual and stylish installation. The power consumption is around 100 watts, which is comparable to the power consumption of a modern flat-screen TV.

With eSENSE, no fire protection requirements need to be met. The electric fire is a real alternative for anyone who doesn't have a fireplace but still doesn't want to do without fire. It is sustainable, emission-free and environmentally friendly.
