The new stove 600 RD from Attika

High-quality, modern, and efficient - the new stove 600 RD from Swiss manufacturer Attika impresses with both its elegant design and its outstanding technical features.

Thanks to its rectangular form and generous glass panes, the stove is perfect as a room divider. The fire in the generous firebox is visible from two sides, creating a harmonious connection between the rooms. 600 RD is available in six stylish colours: black, platinum, mocha, nickel, white and sand. The flue pipes can also be selected in a matching colour. The timeless design is complemented by high-quality materials and the best technical functionality.

The 600 RD is based on the tried and tested R-600 fireplace insert, which has been appreciated for years for its quiet and pleasant view of the flames. This is thanks in part to the intelligent window rinsing and the ADVANCED GLASS CONCEPT®. The concept includes double glazing and infrared-coated ceramic glass, which ensures an increased combustion temperature in the firebox. In combination with the latest combustion chamber technology, this means highly efficient combustion and always clear, soot-free glass panes.

Like many Attika models, the 600 RD can also be customised. You can choose between a glass door or a steel door, which can be opened on one or both sides as required. The 600 RD can also be fitted with a six-millimetre steel top plate or an internal top plate. 600 RD can be installed room air independent thanks to the AIR-system. This increases the overall efficiency of the stove

and does not interfere with controlled ventilation systems, for example in Minergie or low-energy houses.

With its many individual options, the 600 RD stove adapts to a wide variety of living situations and furnishing styles. Like all Attika stoves, the 600 RD perfectly combines form, material, and functions.
