

## PRESS INFORMATION

Q-TEE 2 C Porto | steel black | steel door | calf leather brown handle

## **Q-TEE 2 C - now also with natural stone «Porto» cladding**

**Q-TEE 2 C Porto stands for a unique interplay of design, heat accumulator and functionality. The curved form, high-quality workmanship and efficient combustion make the new model from Swiss manufacturer Attika the stylish centrepiece of any living room.**

Q-TEE 2 C impresses as a compact stove with a rounded design. It is available with a steel casing, soapstone cladding and now also with the elegant natural stone «Porto». The 6 cm thick stone slabs not only give the stove a stylish appearance, they also store the heat from the fire and gently release it into the room for hours. In addition to the two stone variants, you can choose between a steel door and a glass firebox door as well as six different handles. The wood compartment under the firebox can be closed with an optional panel.

The timeless design is rounded off by high-quality materials and a unique fire experience. State-of-the-art combustion chamber technology ensures highly efficient combustion. Thanks to

intelligent window rinsing, the glass panes always remain clear and soot-free. The result is a unique view of the flames, which is optimally visible through the beautifully curved glass pane.

Q-TEE 2 C Porto can be installed room air independent thanks to the AIR-system. This increases the overall efficiency of the stove and controlled ventilation systems, for example in Minergie or low-energy houses, are not affected.

In addition to Q-TEE 2 C, the BANDO, CARO 120 and JUNO L models are also available with a cladding made of elegantly polished soapstone or the elegant cream-coloured natural stone «Porto». As a natural product, each version is unique. The colouring and textural effect is slightly different for each stove.
