## NEXO 160 stove - new with stone cladding

The popular NEXO stove is now also available with two different types of stone cladding. The two models NEXO 160 Soapstone and NEXO 160 Porto models complement the best-selling series from the Swiss manufacturer, Attika. True storage stoves, they combine modern design with an unrivalled ability to store and release heat over hours — a feature unique to stoves with solid natural stone cladding.

NEXO 160 Porto and NEXO 160 Soapstone models are sure to attract attention. Their impressive height of 160 centimetres and robust stone slabs give the stoves a striking appearance. The clear lines complete the modern design. The Attika customized-concept is typical of the NEXO series. It guarantees a bespoke design tailored to the customer's needs.

The two new models are available with or without side windows. You can also choose between a steel door in three different colours or a glass door. There are also seven different handle

options to choose from. NEXO fulfils individual requirements in terms of both design and functionality. You can choose between two types of air regulation: classic, manual air regulation or the electronic burn-off control ElectronicAIR™. ElectronicAIR™ automatically ensures the right air mixture during every stage of the combustion process, resulting in economical combustion and the lowest possible emission values. ElectronicAIR™ can be controlled using a remote control or the Attika Holz app. A heat-storage module© can also be installed on request.

The NEXO stove series boasts a timeless design, high-quality materials and a proven fire experience. The NEXO stove series has long been admired for the beautiful and enjoyable view of the flames it provides. This is thanks in part to the intelligent window rinsing and the ADVANCED GLASS CONCEPT®. This concept incorporates double glazing and infrared-coated ceramic glass to ensure an increased combustion temperature in the firebox. Combined with the latest combustion chamber technology, it provides highly efficient combustion and ensures the glass remains clear and soot-free at all times.

The NEXO 160 Soapstone and NEXO 160 Porto models can be installed independently of the room's air supply thanks to the AIR system. This increases the stove's overall efficiency and does not affect controlled ventilation systems, for example in Minergie or low-energy houses.

The popular BANDO, CARO 120, Q-TEE 2 C and JUNO L models are also available with the two stone claddings, in addition to the NEXO 160.

The Swiss company based in Cham has been developing and marketing stoves and fireplace inserts for over 40 years. Production takes place in the sister company RAIS in Denmark. Various fireplaces have won numerous international design awards. Today, Attika and RAIS employ around 130 people. The products are sold through qualified specialist dealers in thirteen European countries as well as in North America, Australia, New Zealand and Japan.
