Montreal Built-in Fireplace

Style, quality and coziness - on your terms

Montreal – a natural choice

Montreal is a high quality built-in fireplace for those with focus on design, safety and quality.

Local production

The fireplaces are manufactured at our location in Vestbjerg. The casing is manufactured in durable 8mm steel, ensuring a long-lasting product. The casing is powder-coated, then fitted with custom-made glass holders and glass. The glass is manufactured locally.

Design options:

Montreal is available in the following designs:

- Open front
- Open front and back
- Open front and one side
- Open front, back and one side

Burner types:

All our burners are manufactured in-house. We offer two electronic burners and one non-electric.

Electronic models:

- Denver Basic, a bioethanol burner.
- Hybrid Mist, a hybrid burner that requires demineralized water.

Our electronic fireplaces come equipped with various safety sensors, such as leakage and temperature. The fireplace is easily operated through the control panel, the included remote control, or through the Decoflame App, available for both Android and Apple.

Manual burner:

Montreal is also available with a manual burner. Just like our electronic models, they are manufactured at our workshop in Vestbjerg, and come in different sizes.

The built-in fireplace for those looking to create a personalized solution.

As manufacturer of our own casings and burners, we are able to offer custom solutions for your project.

Everything from the size of the casing and the burner, to unique colours and materials can be selected.

Example:

A custom-made Montreal with a manual burner, fitted within a comparatively narrow wall.

Decoflame App, allows you to:

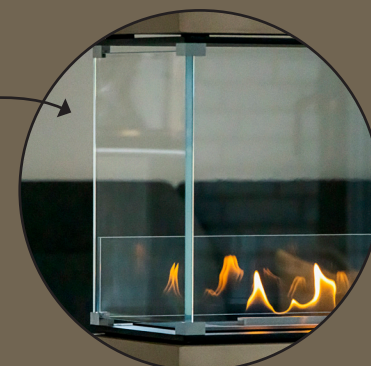

- » Adjust the power of the flame, or the fine water particles when using the Hybrid Mist
- » Check the fuel consumption
- » Check the remaining run time
- » Check the fuel level, or the water level when using the Hybrid Mist
- » Switch on and off
- » Automatic Time-Off function

A remote control is included with all versions of the electronic fireplaces. It can be used instead of the app.

The remote control is easy to use, and offers basic functions: on/off and six levels.

For the Denver Basic burner, ECO-Wave is one of the levels.

Example:

A custom-made Montreal with two high and one low glass panel. Normally three low glass panels.
